

# Selenium Windows UI testing – lecture

---

**Workshop length:** Two full hours

**Course goals:** Selenium is one of the leading tools in our arsenal for testing web apps, and it sure does a great job at it!

But did you know that Selenium can be also used to test windows applications? Be that UWP, WPF, WinForms or even Win32 applications. In this lecture we will see two different technologies that extend the original Selenium to allow for windows native applications testing.

**Target audience:** Manual QA personal, and automation engineers.

## Curriculum:

- Selenium quick overview
- Common selenium extending technologies
- Testing mobile applications using Appium overview
- WinAppDriver
- Inspecting native applications to recover elements identifiers
- Winium
- Comparing both technologies

**Good luck!**
